

ENERGY MASTER

High Performance Battery

While other batteries claim to maintain 80% capacity over the life of the product, that's only half the story. In the material handling industry, performance rules. When it comes to performance – the working power you need for the long haul – the Energy Master® High Performance Battery is unsurpassed.

If you looked inside a Energy Master® High Performance Battery and compared it to other industrial batteries, you could easily see significant design differences for yourself.

The positive plate of a Energy Master® High Performance Battery features the industry's most conductive grid structure. That means there is less resistance to the flow of current – and more power produced within

the grid. With advanced engineering technology, the positive active material is "locked" to the grid for increased performance at all levels, especially at high current discharges. With this higher capacity over the life of the plate, you'll notice more power to the load, cooler battery operation and lower maintenance costs.

The advantages of premium-quality materials and engineering know-how are built into every Energy Master® High Performance Battery to give you the most effective capacity and voltage for the long run. In fact other batteries

may cost less initially, but the Energy Master® can outrun them over time – and keep on running – to give you the best possible return on your investment.

Swift Industrial Power
